

A unified mining environmental management software solution for even the most complex operations.

The mining industry faces unique data management challenges. Even a single site operation must maintain a diverse set of monitoring programs and adapt to complex compliance requirements. Multiply this across dozens of mines in multiple jurisdictions, and the sheer volume of data can make maintaining compliance an overwhelming challenge.

Learn how Locus mining environmental management software solutions can help your company save time and resources, reduce operational costs, GRC/regulatory risk, and simplify your EHS compliance obligations.

Your complete environmental compliance solution

Permit & task tracking

Remote data collection & mobile

Geological data/boreholes/drillholes

Waste handling & disposal tracking

Field & analytical chemistry data

Incident reporting

Groundwater & surface monitoring

Meteorological & air quality monitoring

Environmental Compliance Simplified
