

The environmental “command center” for local governments

Municipalities face a range of environmental data management challenges as they work to meet regulatory requirements, monitor environmental quality, and ensure sustainability. Our Compliance for Municipalities software module is designed to address the unique environmental challenges facing local governments.

Locus Compliance for Municipalities Module allows you manage all aspects of municipal environmental compliance from one place. No more searching through Excel spreadsheets, paper, and narrowly focused databases. The module combines several Locus applications, including our powerful **task and compliance engine**, our intuitive **inspections app**, **GIS mapping**, and straightforward **analytical data tracking**.

Above: Locus provides the command center for municipal environmental programs.

Software Highlights

- ◇ Track and manage environmental compliance obligations
- ◇ Ensure that monitoring requirements are met
- ◇ Track monitoring data, which is often buried in Excel and PDF files, or managed by third parties
- ◇ Track stormwater permits, exceedances, complaints, and illicit discharges
- ◇ Manage inspections for permitted facilities and locations
- ◇ Ensure that inspections and corrective actions are followed up in a timely manner
- ◇ Simplify communications with fellow stakeholders and constituents.

Key Features

- ◇ Full task tracking and compliance calendar to help you keep on top of all your obligations
- ◇ Track permits and their corresponding expiration and renewal dates as well as optional workflows
- ◇ Create your own inspection forms from pre-configured templates, including stormwater, pretreatment, and drinking water
- ◇ Track corrective actions from inspections, including reminder emails to businesses required to respond
- ◇ Configure e-mail notifications to monitor and/or escalate task status
- ◇ Optionally track physical assets owned and operated by organization, with links to tasks and inspections
- ◇ Optionally track analytical results for drinking water, stormwater, and other streams which you need to monitor*
- ◇ Configuration choices include:
 - » Custom completion forms
 - » Third-party regulatory service integration
 - » Data migration from existing systems/spreadsheets
 - » Business process specific dashboards and views.
